ACTIVITY-BASED LEARNING

Consolidated Report of Three Selected Case Studies

Student Name	Ghattamaneni Doondey Lakshmi Alekhya
Roll Number	26000901
Branch / Section	CSM-1
Course	Web Development

Selected Case Studies

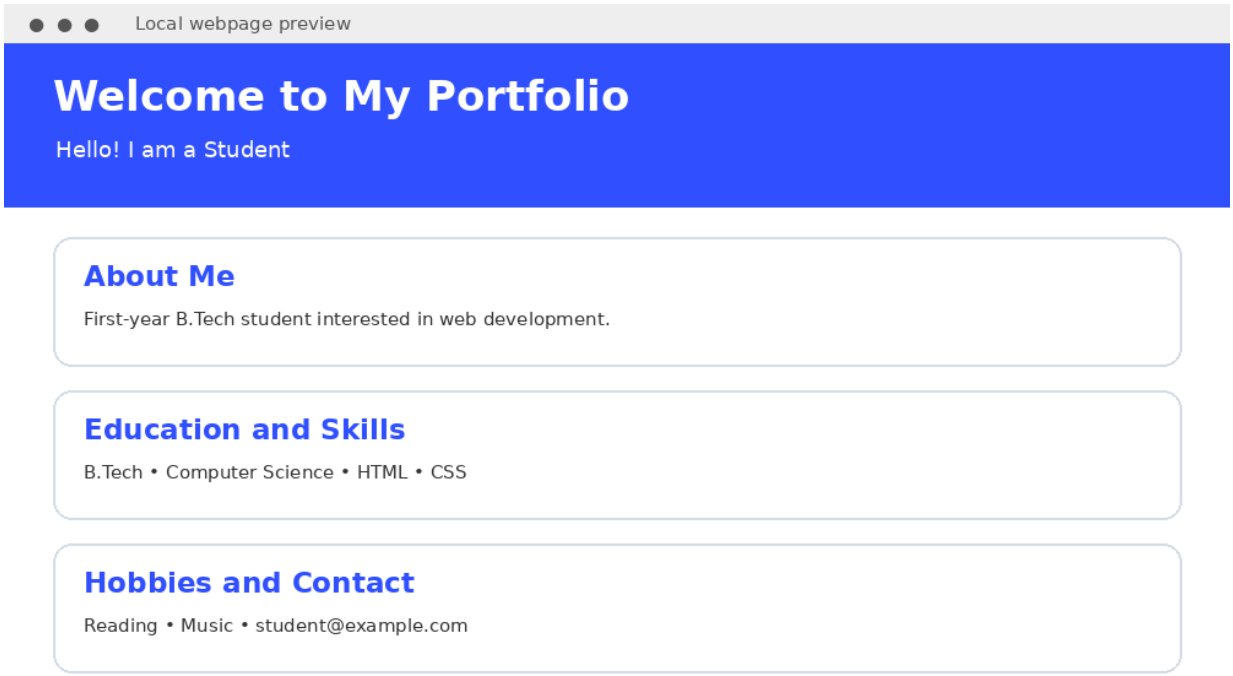

1. Personal Portfolio Website
2. Online Shopping Website
3. Travel Agency Website

Objective

The objective of this assignment is to design and develop three simple webpages using HTML, CSS and basic JavaScript. The pages demonstrate structured content, navigation, responsive layouts and simple user interactions.

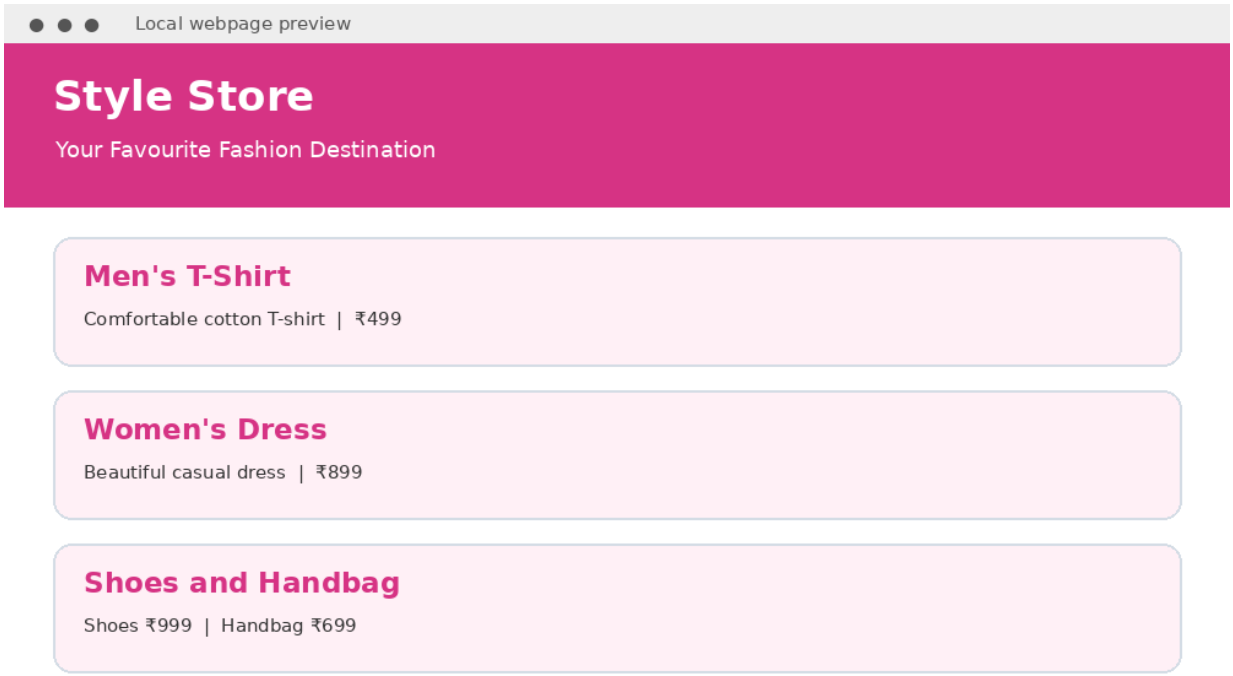

1. Personal Portfolio Website

This page introduces a student and displays education, skills, hobbies, projects and contact details. Navigation links take the visitor to each section.

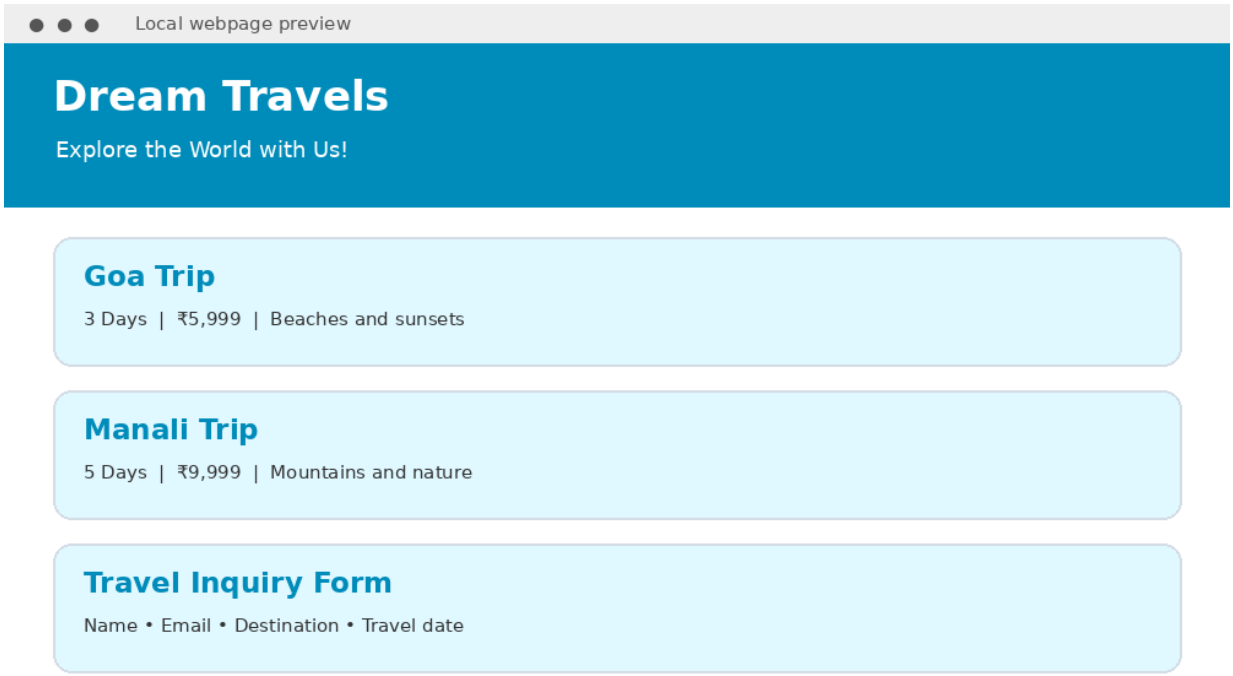

2. Online Shopping Website

This page displays fashion products, descriptions, prices and demonstration Buy Now buttons. It uses product cards and a responsive layout.

3. Travel Agency Website

This page displays holiday packages, destinations, durations and prices. Visitors can select a package and fill in a sample travel inquiry form.

Conclusion

The three webpages were created with simple HTML, CSS and JavaScript. The portfolio presents student information, the shopping page presents products, and the travel page presents holiday packages and an inquiry form. Each webpage can be opened directly in a web browser.

How to Run the Webpages

Open the relevant case-study folder and double-click its HTML file. The webpages do not require a server or extra installation. Replace the sample contact information with your own details before submission.

GitHub Submission Checklist

■ Create a GitHub repository named WD-Activity-Based-Learning.
■ Upload all three case-study folders and README.md.
■ Upload this consolidated report PDF.
■ Fill in the student details in README.md and on this report cover.
■ Submit the repository URL to the faculty member / lab mentor.

Note: The shopping buttons and travel inquiry form are demonstration features only; they do not make real purchases or send/store information.
